Software extension for CASimulcrypt

After the successful launch of Simulcrypt for MIE-xx IP-QAM series, now also the MK-xx head-end series can be upgraded with the software option MKS 1-02 to integrate Simulcrypt to the functional range of this product series.

Both, Verimatrix and Conax are supported so far and in the next step Samsung's Lync DRM will be added, so that the complete head-end range has a much wider field of applications - from use in professional networks to hospitality applications.

Any existing installation can be upgraded with this new feature and makes sure that investments in AXING head-end system are absolute future proof.
